

# Smart cycle path

## A smart cycle path to quickly meet your needs

The lockdown measures have limited our movements to the bare minimum, resulting in a decrease of individual motorized traffic and of public transport use.

**In order to improve the journeys and to promote the use of soft mobility, Citelum supports you into the implementation of temporary cycling facilities.**

Citelum offers a complete solution enabling to develop a **functional and smart cycle path**.

Our proposal includes the installation of the necessary **signs to the cycle paths development** (beacons or separators, horizontal and vertical signage) and of **several connected services** (counting and detection system).

To ensure an optimal comfort to cyclists, solutions allowing to control incivilities will be deployed.

Our teams will support you into defining your needs to offer a solution adapted to your environment.

### You wish to:

- Install temporary relevant cycling facilities to promote the use of soft mobility
- Know the use of the installation in real-time
- Ensure the proper use of cycle path

### A complete solution:

- An operational cycling facilities to delineate the cycle path
- Counting cameras to be aware of the cycle paths utilisation in real-time
- An incivility detection system that sends alerts to your services in order to guarantee the respect of car drivers

### By choosing Citelum you choose:

- Committed teams with a strong experience in works, operations and maintenance in several areas related to connected services urban management
